Kuali Rice 2.6.0-M1-SNAPSHOT can be downloaded from the Rice website at http://kuali.org/rice/download.

There are three different distributions of Rice available: source, binary and server. Please read the [Installation Guide](#) for more details on each of these distributions.

Documentation

API Documentation can be found at http://site.kuali.org/rice/2.6.0-M1-SNAPSHOT/apidocs/index.html

Formal documentation can be found at http://site.kuali.org/rice/2.6.0-M1-SNAPSHOT/reference/html/index.html. This documentation is still in the process of review and update which will continue through subsequent releases, so please follow the notes in each document to report any outdated information.

Contact

If you encounter any difficulty, please don't hesitate to contact the Rice team on our public collaboration mailing list at `<rice.collab@kuali.org>`. Please indicate that you are using the 2.6.0-M1-SNAPSHOT version of Rice.

Upgrade Guide

Below is information on how to upgrade your database to Rice 2.6.0-M1-SNAPSHOT from the previous version. If you are upgrading from another previous version, you may want to reference [Database Upgrade Paths](#).

Upgrading the server database

MySQL and Oracle scripts for performing these updates are available in the following locations in the Rice distribution downloads:

```
scripts/upgrades/2.5.0/final/update-mysql-server.sql
```

```
scripts/upgrades/2.5.0/final/update-oracle-server.sql
```

Client Database Upgrade

No changes.

KEW XML Updates

The included KEW XML updates are OPTIONAL. They update the <helpDefinitionURL/> to make the document help point to the correct location, which defaults to the online Rice documentation for that

specific version. Institutions that do not want to ingest a new document type may instead run the SQL included in each of the documents. Otherwise, they may wish to ingest all documents.

Conversion Guide

Rice will eventually require conversion from the Kuali Nervous System (KNS) to the Kuali Rapid Application Development (KRAD) framework. Rice implementers can also convert now to avoid larger upgrades in the future, and the information on how to do this is in http://site.kuali.org/rice/2.6.0-M1-SNAPSHOT/reference/html/KNS2KRAD_ConvGuide.html. This guide includes information on how to run the automatic conversion tool, a list of items that may need to be changed manually, and a primer on how to use the new KRAD Data Framework using the Java Persistence API (JPA).
